Forward Deployed Engineering

CAPABILITY OVERVIEW

Engineering closer to the business.
Solutions built for real operations.

- Business Discovery & Solution Design
- Application Development & Modernisation
- Systems Integration & Automation
- Applied AI Engineering
- Production Engineering & Reliability
- Embedded Delivery & Continuous Improvement

A Practical, Integrated Engineering Approach for Real Business Outcomes

Solve Real Business Challenges
Turn complex needs into working solutions.

Work Closer with Your Team
Collaborative, outcome-focused delivery.

Create Lasting Value
Reliable, scalable and easy to evolve.

FORWARD DEPLOYED ENGINEERING

What Companies Look For

A partner who brings technical depth, business understanding and the ability to deliver practical, production-ready solutions with measurable impact.

Business Impact
Solutions that address real operational needs and deliver results.

Faster Delivery
A focused, hands-on team that can plan, build and adapt quickly.

Operational Fit
Seamless integration with existing systems, data and workflows.

Long-Term Value
Reliable, scalable and maintainable solutions with ongoing support.

Our Capability Areas

Business Discovery & Solution Engineering
Understand the business, define the right solution and plan for measurable outcomes.

Applied AI Engineering
Introduce AI where it adds clear business value, such as intelligent automation, insight and decision support.

Enterprise Application Development
Build, extend and modernise business-critical applications.

Production Engineering & Reliability
Ensure secure, stable and performant solutions with testing, deployment and monitoring.

Systems Integration & Automation
Connect applications, data and processes to improve efficiency and reduce manual work.

Embedded Delivery & Continuous Improvement
Work alongside your team through implementation, adoption and ongoing enhancement.

The Business Outcome

Operate Smarter
Streamline processes and improve productivity.

Create Business Value
Turn technology into measurable results.

Build for What's Next
A flexible foundation for future growth.

FORWARD DEPLOYED ENGINEERING

How We Work With You

A pragmatic, collaborative and outcome-focused engagement from business discovery to continuous improvement.

Our Engagement Approach

Discover
Understand your business, goals and constraints.

Design
Define the right solution, scope and outcomes.

Build
Develop, integrate and test with your team.

Deploy
Release to production with confidence.

Evolve
Measure, improve and extend for lasting value.

Typical Use Cases

Modernise Business Applications
Extend, integrate or re-engineer critical systems.

Unify Systems & Data
Connect platforms, automate workflows and improve data flow.

Apply AI for Real Business Value
Automation, insights and decision support where it makes sense.

Build for Scale
Develop new solutions that support growth and operational efficiency.

Engagement Models

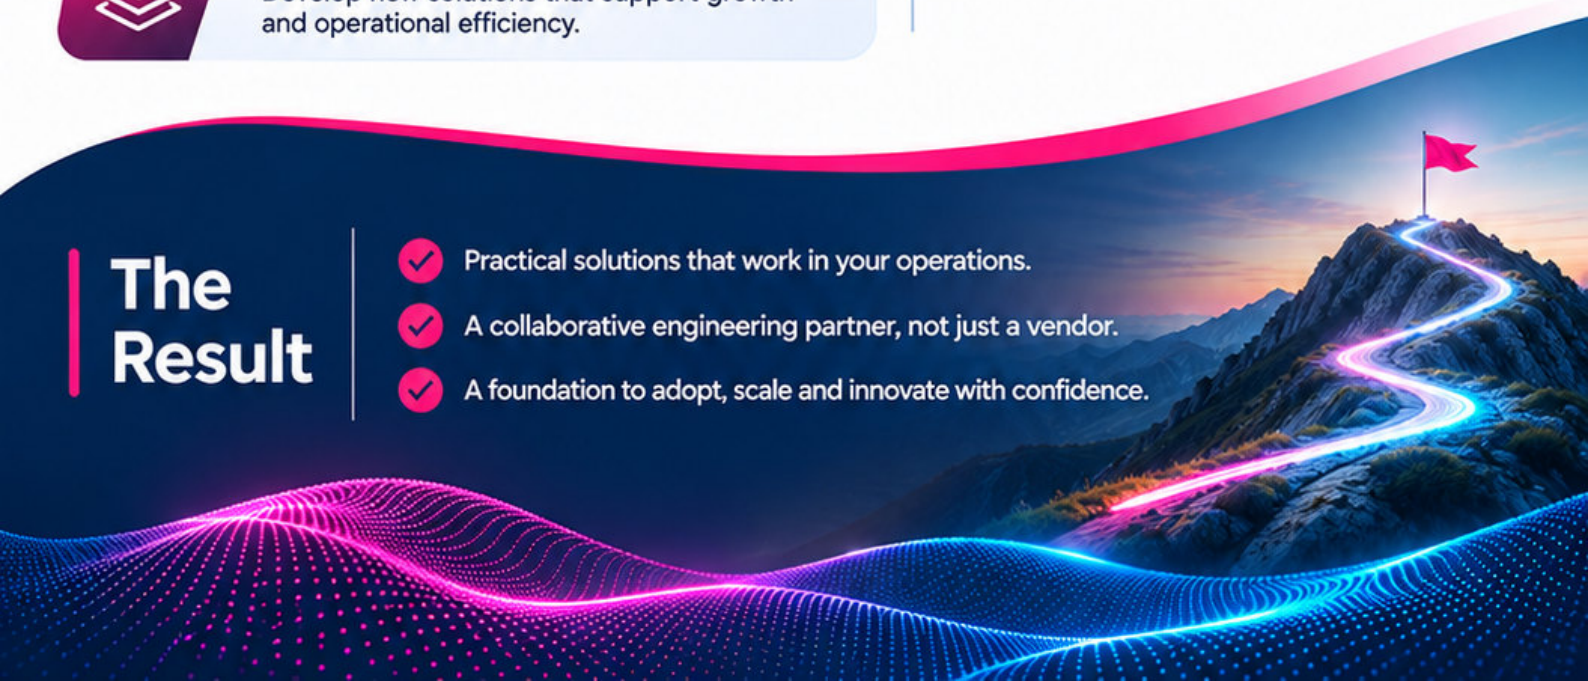
Embedded Engineering
Work closely with your team for defined outcomes.

Project Delivery
A focused, end-to-end solution for a specific business need.

Ongoing Partnership
Continuous support, enhancement and capability extension.

The Result

- Practical solutions that work in your operations.
- A collaborative engineering partner, not just a vendor.
- A foundation to adopt, scale and innovate with confidence.



FORWARD DEPLOYED ENGINEERING

Why Engage With Us

A practical, collaborative engineering partner that combines technical depth with business understanding.

Business-Centric Engineering
Solutions aligned with real operational goals.

Collaborative & Flexible Teams
Work as an extension of your team.

End-to-End Delivery
From discovery and design to production and support.

Practical AI Adoption
Apply AI where it creates clear value.

Integration & Automation Expertise
Connect systems, data and processes for efficiency.

Long-Term Partnership
Ongoing improvement, scale and innovation.

Relevant Experience

A selection of our engineering work across industries and business needs.

Operational Systems
Streamlined workflows and improved process efficiency.

Business Applications
Built and enhanced solutions that support day-to-day operations.

Data & AI Enablement
Turned data into useful insights and practical automation.
