BUSINESS ANALYSIS & FUNCTIONAL SOLUTION DESIGN

Clarity Before Development.

Practical analysis and solution design for evolving software products.

We help software companies and enterprise product teams understand requirements, investigate existing functionality and define practical enhancements that are ready for engineering.

Analyse Requirements — **Investigate Existing Behaviour** — **Identify Gaps** — **Design Solution** — **Enable Development**

From business requirements to actionable solutions.

Requirements Analysis | Functional Investigation | Gap Assessment | Solution Design | Development Handover

How We Work Within Existing Software Products

A practical and proven approach to investigate, design and recommend the right solution.

01 Understand the Requirement

02 Investigate Existing Functionality

03 Identify Gaps & Options

04 Design the Solution

05 Prepare for Development

What We Deliver

- As-Is and To-Be analysis
- Practical solution recommendations
- Interface-level design (mockups)
- Acceptance criteria & implementation notes
- Clear, developer-ready handover

The Outcome

- Faster and more confident delivery
- Reduced development rework
- A solution that fits the existing product and business workflow

Engagement Models & Delivery Integration

Flexible ways to engage, aligned with your product roadmap, team structure and delivery needs.

Discovery & Functional Design

A focused, fixed-scope engagement to investigate requirements, define solutions and provide a development-ready handover.

Dedicated BA & Solution Design Support

Ongoing, scalable analysis and solution design capacity to support your product backlog and continuous enhancements.

Our Delivery Approach

Plan & Align
Understand goals, scope and context

Analyse & Validate
Investigate, test and confirm current behaviour

Design & Recommend
Define the solution with clear, practical details

Collaborate & Refine
Work with your product and engineering teams

Handover & Support
Provide a development-ready package and implementation clarity

Seamless Team Integration

Work with Your Product Team
Collaborative, transparent and aligned with your delivery process.

Fit Your Delivery Model
Agile, hybrid or phase-based engagements.

Bring Product Context
Understand your system, workflows and business rules to propose practical, low-effort solutions.

Experience, Trust & Your Next Step

Proven experience in analysing, designing and delivering functional solutions within a live enterprise software environment.

In Practice: Our Experience

We are already supporting an established enterprise software product with:

- Analysis of enhancement requests and change requirements
- Investigation of existing functionality and configurations
- Practical solution options with interface design where needed
- Clear, development-ready handover and ongoing support

Why Partner with Primewayz

Real Product Experience
Applied, hands-on experience in enterprise software analysis and design.

Practical & Solution-Oriented
Focus on workable, low-risk and high-value outcomes.

Collaborative & Flexible
Work as an extension of your product and engineering team.

Scalable Support
From a defined assignment to ongoing BA and solution design capacity.

Let's Discuss Your Requirements

Explore how Primewayz can support your product roadmap, enhancement backlog and functional design needs.
